Who can see it?

Look at your dashboard with a reader's eyes Names _____

Superset on your own VM, where you are Admin, with your `Steam market` dashboard. You need two browser windows: the normal one is **you**, a private (incognito) one is **the reader**. A Superset is a game server: private while the owner builds, and every player has a rank. **Write each result here before you go on**: the tasks are one experiment.

Reference

Role	What it can do
Admin · the server admin	Everything, including granting and revoking rights and changing other people's charts and dashboards.
Alpha · a trusted builder	Sees **all** data sources and can add new ones, but only alters what it owns and cannot give rights to others.
Gamma · a player with a rank	Only sees charts and dashboards made from data sources it has been **given** access to. Mostly a reader.

The **owners** of a dashboard are the users who may edit it: you, because you created it. The label next to its title says **Draft** or **Published**.

P Your vote, before you start: a Gamma user and a **published** dashboard. Do they see it?

Yes / No _____ Why? _____

Task 1 · A reader who sees nothing (10 min)

Step	Do this	You should see / write
1	Make sure `Steam market` is still **Draft** (the label next to the title).	
2	**Settings → List Users → + User**. **Username** `viewer`, any first and last name, **tick Is active?**, a made-up email ending in `.example`, **Roles**: `Gamma`, a password you make up for this user. **Save**.	`viewer` in the list of users.
3	Open a private window, open Superset in it and log in as `viewer`.	The user name at the top right.
4	Open **Dashboards**. Look at the top menus too: which one do you have in the Admin window that `viewer` does not?	In **Dashboards**: _____ Missing menu: _____

Task 2 · Open the first lock (6 min)

Step	Do this	You should see / write
1	Admin window: open `Steam market` and click **Draft → Published**.	In **Dashboards**, the **Status** column says **Published**.
2	Private window: reload **Dashboards**.	Does `viewer` see it now? _____

2a Was your vote right? **Do not fix anything yet.** What do you think is still closed?

_____

Stuck?

- **"Invalid login" for `viewer`**: wrong password, or **Is active?** was left unticked. Edit the user and tick it.
- **`viewer` sees the dashboard already in Task 1 or 2**: you are in the Admin window. Check the user name, top right.
- **`viewer` cannot open any page after Task 3**: it needs both roles, `Gamma` **and** `Steam readers`.
- **The permission is not in the list**: type `games clean` with a space and wait. With _ it gives "No data".
- **Forgot the password of `viewer`**: as Admin, delete `viewer` and create it again. Never change your own.

Task 3 · Open the second lock (11 min)

Step	Do this	You should see / write
1	Admin window: **Settings → List Roles → + Role**. **Role Name**: `Steam readers`.	
2	In **Permissions** type `games clean` (**with a space**: this list shows every _ as a space) and choose the entry that begins with `datasource access`. Save.	Its full name: _____
3	**Settings → List Users** → edit `viewer` → **Roles**: `Gamma` **and** `Steam readers`. Save.	Two roles for `viewer`.
4	Private window: reload **Dashboards**, open `Steam market`, try a filter.	Does `viewer` see it now? _____ The KPI row: _____

3a Look at the name of the permission. What did you give access to: the dashboard, or something behind it?

_____

Task 4 · A link is not a key (7 min)

Step	Do this	You should see / write
1	Admin window, on the dashboard: the three dots → **Share** → **Copy permalink to clipboard**.	
2	Private window: log out, then paste the link.	You get _____
3	Log in again as `viewer` and paste it once more.	You get _____

The four states

	Dashboard	Roles of `viewer`	Does `viewer` see it? What was closed?
1	Draft	Gamma	
2	Published	Gamma	
3	Published	Gamma + Steam readers	
4	(the link)	not logged in	

Done when The four states are filled in · `viewer` opens `Steam market` in the private window and the filters work. **Fast?** Put the dashboard back to **Draft** and check `viewer` again: what is gone, and what is not?

At home Project: publish your dashboard and write two lines: who its readers would be and which datasets their role needs. If your data came from an API, check that no key appears in any chart, note or screenshot.
